Engineered for Performance and Nutrition with a Crunchy Protein Delivery

SolvPro®

Vegan Crisps

These next-generation SolvPro® vegan protein crisps feature an optimized matrix of complementary plant proteins, precisely balanced to reach a PDCAAS of 1.0.

The result: exceptional protein quality, targeted density and texture, and seamless inclusion across bars, cereals, clusters, and snacks. Build plant-based products that fuel strength, recovery, and clean nutrition....with a crunch that your customer's crave!

With the new federal guidelines recommending daily intake for protein of 1.2-1.6 g/kg of body weight, everyone needs to figure out more ways to add protein to their daily diets! When making qualified front label package claims for protein, the quality of the protein used does matter and PDCAAS of 1.0 is critical to get full credit for the added protein. From this perspective, all proteins are not created equal for both functionality and nutritional properties, so check out our SolvPro® options, in powder, crisp, and texturized formats.

Available in both non-GMO and organic formats and in a variety of sizes and shapes, we can customize the perfect crisp for your specific application needs.

Optimize your protein with SolvPro®!

Talk with your Osage sales representative to get the latest list of commercialized options or let us design a system specific to your needs.
