TECHNICAL BULLETIN

SolvPro®

SolvPro® – Protein Isolates - Sustainability

Osage Food Products is committed to putting the planet and people first by developing plant-based food technologies that offer a sustainable way to feed the world.

The proprietary protein extraction and purification technologies to make our SolvPro® isolates use no harsh chemicals, emit no noxious odors, and consume significantly less energy than animal protein production. Our technologies are environmentally friendly and clean, using renewable plant-based sources as input material and extracting nutritionally valuable plant-based products for human consumption.

Plant-based protein production offers consumers a protein source that is both good for health and good for the planet. Compared to animal protein production, plant-based proteins are environmentally friendly and offer a significantly lower carbon footprint.

In fact, it takes:

- 6X less water to produce protein from pulses versus beef
- 49X less land to produce protein from pulses versus beef
- 100X less greenhouse gases to produce protein from pulses versus beef
